

DNAPLANET

Can you test other things than just saliva samples ?

Yes. We also perform DNA-analyses on trace-samples . In this area, we have much experience. We attend the ring tests of the German Society for Legal Medicine. Such tests, as well as other things, are carried out.

However, not every trace-sample is suitable for such a test. For example, hair from a hairbrush, or cut hair is not suitable for a paternity test. Because of the extra work required to perform this test (it is done by hand), it costs an additional 99 Euros or more depending on the trace sample. Please consult us before you order the test to make sure your trace-sample is suitable for such a test.
